Abstracts

POS peripherals are external hardware components that complement the core POS system. They are designed to extend the functionality of the POS system. These peripherals can be connected to the central POS terminal, providing additional features and improving the overall efficiency of the business. The growth of retail chains, supermarkets, restaurants, hotels, and quick-service outlets is one of the strongest market drivers for POS peripherals. As brick-and-mortar stores compete with e-commerce, efficient checkout systems with integrated peripherals help them deliver faster service and reduce errors. Retail modernization, particularly in developing markets, is fueling demand for POS peripherals that enable both cash and cashless transactions. Modern customers expect quick, seamless, and hassle-free checkout experiences. POS peripherals such as high-speed receipt printers, contactless card readers, and barcode scanners help businesses meet these expectations. The ability to process transactions faster not only improves customer satisfaction but also increases throughput, making such peripherals critical for businesses with high transaction volumes. The rise of credit cards, debit cards, mobile wallets, and NFC-enabled devices is driving demand for card readers, contactless terminals, and secure payment peripherals. As digital payments expand globally, especially post-pandemic, businesses are investing in advanced peripherals to support hybrid payment ecosystems that accommodate both cash and electronic payments. SMBs, pop-up stores, and kiosks are adopting POS systems at a rapid pace due to their affordability and ease of integration. These businesses require compact, low-cost peripherals such as portable barcode scanners, compact receipt printers, and printer-driven cash drawers. The rising entrepreneurial culture and gig economy are major contributors to the growth of entry-level and mid-tier POS peripherals. Even as digital payments grow, cash handling remains significant in many regions. Peripherals such as cash drawers, counterfeit detectors, and biometric authentication devices enhance security in financial

transactions. The need to prevent fraud, reduce errors, and safeguard revenue is a strong driver for businesses to adopt secure POS peripherals. The POS peripherals market is being reshaped by IoT, AI, and cloud-based integration. Modern peripherals now feature wireless connectivity (Bluetooth, Wi-Fi, Ethernet), smart monitoring, and cloud-based data tracking. For example, smart cash drawers provide real-time cash level tracking, while advanced barcode scanners offer AI-driven inventory insights. This convergence of hardware with software enhances operational efficiency and analytics, driving adoption.

The global POS Peripherals market size was estimated at USD 6059.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
