## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Posistor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A posistor, or Positive Temperature Coefficient Resistor, is a type of temperature-sensitive resistor used in electronic applications. Unlike other thermistors, it has a positive temperature coefficient, meaning its resistance increases as the temperature rises. This property makes it valuable for tasks like temperature sensing, overcurrent protection, and self-resetting fuses.

The global Posistor market size was estimated at USD 375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Posistor market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
