## Abstracts

A Positioning Visualisation System for Dredging is a specialized technological solution that provides real - time visual representation of the dredging process and related information. It integrates data from various sources such as DGPS, electric compass, depth sounder, AIS, and dredging integrated control system. Through communication interfaces like RS - 485, RS - 422, or RS - 232, it reads information about the ship's bearing, heading, draft, and the position of the rake arm or reamer, and then displays this information vividly on a computer screen in the form of visual graphics. This system enables dredge operators to accurately know the location of the dredge head relative to the surveyed and designed surfaces, and it can also show the dredging trajectory, terrain profile, and other information. By providing guidance through the visualization of dredge tolerance, it helps to improve the construction accuracy and efficiency of dredging vessels, and can also prevent over - dredging or under - dredging. The demand for positioning visualization systems for dredging is expanding steadily, driven by the global growth in port expansion projects, inland waterway maintenance, and coastal reclamation works. As dredging operations become more complex and precision-oriented, the need for advanced visualization and real-time positioning systems has intensified to enhance operational accuracy, efficiency, and safety. These systems, which integrate GPS, sonar, radar, and 3D mapping technologies, enable operators to monitor dredging depth, position, and sediment distribution in real time, minimizing environmental impact and rework. Business opportunities lie in providing customized, high-resolution solutions for various dredging vessels and integrating systems with digital twin and remote operation technologies. The increasing emphasis on sustainable dredging, automation, and data-driven project management further opens lucrative markets for manufacturers and software providers offering intelligent, scalable positioning visualization systems.

The global Positioning Visualisation System for Dredging market size was estimated at USD 325.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
