Report Overview

A Positive Displacement Gear Metering Pump is a type of precision pump used to accurately dispense or transfer fluids by employing a gear mechanism that ensures a consistent volume of fluid is moved with each rotation. The pump consists of two interlocking gears housed within a chamber. As the gears rotate, they trap fluid between their teeth and the pump casing, creating a constant and precise flow of fluid through the pump. This design allows for highly accurate control of fluid delivery, making it ideal for applications requiring exact measurements and consistency, such as in chemical processing, pharmaceuticals, and food and beverage industries. Positive displacement gear metering pumps are valued for their reliability, ability to handle a wide range of viscosities, and minimal pulsation, ensuring smooth and precise fluid transfer in various industrial and laboratory settings.
