Report Overview

Positive expiratory pressure therapy (PEP) is one of the frequently used options for airway clearance therapy. In PEP devices, a person breathes through a handheld mouthpiece or mask. This helps air to get behind the mucus in the lungs and move it from the airway walls. The device allows air to pass freely as the patient breathes in, and involves active expiration of the inhaled air against the resistance.

The global Positive Expiratory Pressure (Pep) Devices market size was estimated at USD 450.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
