Abstracts

After chemical mechanical polishing (CMP), semiconductor chip wafers tend to develop surface defects, which can decrease chip reliability and reduce the yield of good-quality chips. Conventional cleaning chemicals are insufficient in effectively addressing this defect issue. Post-CMP Cleaner is specifically designed to remove residual metals, organic residues, CMP slurry, and other impurities left on the wafer surface after the CMP process. Global key players of Post-CMP Cleaner include Entegris, Versum Materials (Merck KGaA), Mitsubishi Chemical, Fujifilm, etc. Global top five manufacturers hold a share over 77%. North America is the largest producer of post CMP cleaning holds a share over 55%. In terms of product, acidic material is the largest segment, with a share over 53%. And in terms of application, the largest application is metal impurities and particles, with a share over 68%. Market Drivers: 1. Technological Advancements and Innovations: The continuous development of CMP technologies and the application of new materials drive the demand for more efficient and eco-friendly post-CMP cleaning liquids. Innovative solutions enable more thorough removal of contaminants while minimizing environmental impact, constituting a primary driver of market growth. 2. Expansion of the Semiconductor Industry: Rapid advancements in fields such as the Internet of Things (IoT), 5G communications, Artificial Intelligence (AI), High-Performance Computing (HPC), and automotive electronics have significantly increased the demand for semiconductors. This directly fuels the need for CMP processes and subsequent cleaning steps, thus propelling the expansion of the post-CMP cleaning liquids market. 3. Demand for Enhanced Chip Performance and Yield Rates: To meet the market's requirement for high-performance, low-power consumption chips, semiconductor manufacturers are increasingly focusing on enhancing chip reliability and production yield rates. High-performance cleaning liquids aid in defect reduction and product quality improvement, becoming a pivotal factor in the industry's development. 4. Stricter Environmental Regulations: The global emphasis on

environmental protection has led governments worldwide to enforce stricter regulations, restricting the use of harmful chemicals. This compels CMP post-cleaning liquid manufacturers to develop more environmentally friendly products, aligning with regulatory requirements and exploring new market opportunities.

Restrictions:

- 1. Cost Issues:** The research and production costs of efficient and eco-friendly post-CMP cleaning liquids are relatively high, potentially escalating the overall cost of semiconductor manufacturing.
- 2. Technical Challenges:** As semiconductor feature sizes continue to shrink, the requirements for post-CMP cleaning liquids become increasingly stringent, necessitating precise control over the cleaning process to avoid damaging delicate structures. These technical challenges increase the difficulty and duration of developing new products.
- 3. Supply Chain Stability:** Fluctuations in raw material prices and the risk of supply chain disruptions, particularly amidst global events like pandemics, can affect the stable supply of post-CMP cleaning liquids, highlighting a significant uncertainty.
- 4. Development of Alternative Technologies:** The emergence and advancement of alternative technologies such as dry cleaning and plasma cleaning pose competitive pressures to the traditional wet cleaning liquids market, impacting its share.

The global Post-CMP Cleaner market size was estimated at USD 211.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
