Abstracts

Post-consumer PET resin refers to polyethylene terephthalate that has been collected, sorted, cleaned, and reprocessed after consumer use?typically sourced from recycled bottles, containers, and packaging?and transformed into raw material suitable for manufacturing new products. This resin retains the key properties of virgin PET, such as clarity, strength, and chemical resistance, while significantly reducing environmental impact by diverting plastic waste from landfills and lowering carbon emissions associated with production. Its applications span various industries, including packaging (food-grade and non-food), textiles (polyester fibers), automotive components, and construction materials, aligning with circular economy principles and growing regulatory and consumer demand for sustainable materials.

The global Post Consumer Pet Resin market size was estimated at USD 11800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
