## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Post-Consumer Recycled Yarn competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of post-consumer recycled yarn (PCR) is 1,866,000 tons, with an average selling price of \$2,500 per ton. Post-consumer recycled yarn refers to yarn made from textiles or plastic products (such as old clothing, discarded carpets, and PET bottles) that have been used and discarded by consumers. This type of raw material typically undergoes a complete consumer lifecycle, involving collection, sorting, cleaning, crushing, re-pelletization, or spinning. Compared to pre-consumer recycling, post-consumer recycling faces greater challenges in impurity handling and quality control, but it offers greater environmental value and can significantly reduce the environmental burden of textile landfill and incineration. This type of yarn is widely used in clothing, home furnishings, automotive, and industrial applications, and is a key material driving sustainable development in the textile industry.

The global Post-Consumer Recycled Yarn market size was estimated at USD 4665.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
