## Abstracts

The post mount double arm light is an outdoor lighting fixture characterized by a vertical pole or post base from which two horizontally extending arms branch out, each supporting a light source typically housed in a weather-resistant enclosure such as a lantern-style or contemporary design. This configuration allows for symmetrical illumination across a wider area compared to single-arm alternatives, making it particularly suitable for pathways, driveways, entry gates, and garden landscapes where balanced, functional, and aesthetic lighting is desired. Constructed from durable materials like aluminum, steel, or composite polymers to withstand environmental exposure, these lights often incorporate energy-efficient LED technology and may feature motion sensors, dusk-to-dawn operation, or smart connectivity for enhanced utility and energy management.

The global Post Mount Double Arm Light market size was estimated at USD 320.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
