Abstracts

Potable water tank coatings are specialized protective layers applied to the interior surfaces of storage tanks, reservoirs, and vessels designed to hold drinking water, with the primary function of preventing contamination, corrosion, leaching, and biofilm formation while ensuring compliance with stringent health and safety regulations such as NSF/ANSI 61, which certifies that the coating materials do not impart harmful substances or affect the taste, odor, or quality of the water. These coatings are typically epoxy-based, polyurethane-based, or cementitious in nature, formulated to be chemically resistant, durable, non-toxic, and capable of withstanding constant immersion and varying water temperatures, thereby extending the lifespan of the infrastructure and safeguarding public health by maintaining water purity from the point of treatment to the end-user.
