Report Overview

Potassium benzoate (CAS 582-25-2) is a potassium salt of benzoic acid, widely used as a preservative in the food and beverage industry due to its antimicrobial properties, effectively inhibiting the growth of mold, yeast, and bacteria. It is particularly favored in acidic products such as carbonated drinks, fruit juices, and pickled foods, where it functions synergistically with other preservatives like sodium benzoate. The compound is also utilized in cosmetics and personal care products to extend shelf life. Its safety profile, as evaluated by regulatory bodies like the FDA and EFSA, has contributed to its widespread adoption, though some concerns exist regarding potential benzene formation under certain conditions, particularly when combined with ascorbic acid. The market for potassium benzoate is driven by increasing demand for processed foods, stringent food safety regulations, and growing consumer preference for extended shelf-life products, while evolving clean-label trends and regulatory scrutiny pose challenges for long-term growth.

The global Potassium Benzoate (CAS 582-25-2) market size was estimated at USD 27.73 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.48% during the forecast period.
