Abstracts

Potassium channel blockers are a class of pharmaceuticals that inhibit the flow of potassium ions through specific ion channels in cell membranes, primarily used in cardiovascular and neurological therapeutics to modulate electrical activity in excitable tissues such as the heart and nervous system; these drugs are clinically significant for treating arrhythmias (e.g., amiodarone, sotalol), epilepsy, and certain autoimmune conditions by prolonging action potentials or stabilizing membrane potentials. The market encompasses both selective and non-selective agents targeting various potassium channel subtypes (e.g., Kv, KATP, hERG), with applications extending to research tools in electrophysiology and drug discovery. Growth is driven by rising prevalence of cardiac disorders, neurological diseases, and ongoing R&D for novel indications, though safety concerns such as pro-arrhythmic risks associated with hERG blockade and stringent regulatory requirements pose challenges to market expansion.

The global Potassium Channel Blocker market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
