## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Potassium Dichromate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Potassium dichromate ( $K_2Cr_2O_7$ ) is a strong oxidizing inorganic compound appearing as bright orange-red crystals. It is widely used in metal surface passivation, chemical oxidation reactions, leather tanning, and glass and ceramic coloring. In 2024, global potassium dichromate production reached approximately 30,000 tons, with an average global market price of around US\$ 3,200 per tons. Potassium dichromate ( $K_2Cr_2O_7$ ) is an important inorganic chemical with strong oxidizing, corrosion-resistant, and chemically stable properties. It is widely used in electroplating, pigment manufacturing, leather tanning, wood preservation, paints, and laboratory analysis. Industrial production generally uses chromite ore as the main raw material, processed through high-temperature oxidation roasting and acid crystallization, with potassium sulfate as a by-product. Global supply is concentrated in China and India, with China accounting for over 60% of total production. The supply chain includes chromite ore, potassium carbonate or hydroxide, and sulfuric acid, processed via alkali fusion and acid extraction to produce potassium dichromate, serving downstream customers such as electroplating plants, pigment manufacturers, leather processing facilities, wood preservation plants, and research laboratories. The market is divided into industrial-grade and analytical/high-purity grades. Industrial-grade products dominate, mainly used in electroplating and pigment production, with gross margins typically 15%–25%, while analytical and high-purity products for specialty applications can reach 30%–45%, with stable market demand. The Asia-Pacific region, especially China and India, represents the largest consumption market due to growing manufacturing and infrastructure demand, accounting for over 60% of global

consumption, whereas Europe and North America show relatively stable growth. Future industry trends indicate a stronger focus on high-purity, environmentally friendly products, optimization of production efficiency and supply chains to reduce costs, and compliance with stringent environmental and safety regulations. High-end application areas, such as specialty pigments, precision electroplating, and laboratory reagents, are expected to maintain stable growth. Environmental regulations are also driving the adoption of trivalent chromium substitutes and recycling technologies, and the industry is gradually transforming from traditional bulk chemical production toward high value-added, high-purity, and environmentally compliant products.

The global Potassium Dichromate market size was estimated at USD 97.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
