## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Potassium Dichromate Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Potassium dichromate powder ( $K_2Cr_2O_7$ ) is a fine, orange-red crystalline inorganic chemical with strong oxidizing, corrosion-resistant, and chemically stable properties. It is widely used in electroplating, pigment manufacturing, leather tanning, wood preservation, paints, and laboratory analysis. In 2024, global potassium dichromate powder production reached approximately 20,000 tons, with an average global market price of around US\$ 3,000 per tons. Potassium dichromate powder industrial production generally involves processing chromite ore through high-temperature oxidation roasting and acid crystallization, with potassium sulfate as a by-product. The supply chain includes chromite ore suppliers, potassium carbonate or hydroxide and sulfuric acid producers, crystallization manufacturers, and downstream users such as electroplating plants, pigment manufacturers, leather processors, wood treatment facilities, and research laboratories. It is typically divided into industrial-grade powder and analytical/high-purity powder; industrial-grade powder, mainly used in electroplating and pigment production, accounts for approximately 70%-75% of the market with gross margins of 15%-25%, while analytical and high-end specialty powders achieve 30%-45% margins with stable demand. The supply chain begins with chromite ore, which is chemically processed via alkali fusion and acid leaching to produce powdered potassium dichromate. Major production is concentrated in China, India, and a few European chemical companies, with downstream customers including electroplating factories, pigment manufacturers, leather processors, wood preservation companies, and research laboratories. The Asia-Pacific region, particularly China and India, represents over 60% of global consumption due to industrial and infrastructure

demand, while Europe and North America show relatively stable growth. Future trends indicate sustained demand for high-purity, environmentally friendly powders, optimization of supply chains and production efficiency to reduce costs, compliance with stringent environmental and safety regulations, and continued stable growth in high-end applications such as specialty pigments, electroplating, and laboratory reagents.

The global Potassium Dichromate Powder market size was estimated at USD 60.51 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
