Report Overview

Potassium diformate is a feed additive widely used in the animal nutrition industry, particularly in swine, poultry, and aquaculture, due to its antimicrobial and growth-promoting properties. As an acidifier, it helps lower gut pH, inhibiting harmful bacteria like *Salmonella* and *E. coli* while promoting beneficial microbiota, leading to improved nutrient absorption and feed efficiency. Its role as a non-antibiotic growth enhancer has gained traction amid tightening global regulations on antibiotic use in livestock. The market is driven by rising demand for sustainable and safe animal protein, coupled with increasing awareness of feed hygiene and disease prevention. However, cost sensitivity among farmers and competition from alternative acidifiers (e.g., formic acid, propionic acid) pose challenges. Geographically, Asia-Pacific dominates demand due to intensive livestock farming, while Europe and North America focus on regulatory-compliant, high-performance additives. Innovations in encapsulated formulations to enhance stability and efficacy are emerging trends. The market is projected to grow steadily, supported by industrialization of animal production and stricter antibiotic bans.

The global Potassium Diformate market size was estimated at USD 500.55 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
