The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Potassium Isooctanoate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Potassium isooctanoate is the potassium salt of octanoic acid. It is commonly used as a fungicide and fungicide for various agricultural applications, especially in organic agriculture. Its working principle is to destroy the cell membranes of fungi and bacteria, ultimately leading to their destruction. Potassium isooctanoate is favored in organic agriculture because it decomposes into potassium and fatty acids, which are naturally occurring substances with lower environmental risks compared to synthetic chemicals. In addition, it has lower toxicity to mammals and is safer to use around humans and animals according to label instructions. In addition to agricultural use, potassium isooctanoate is also used in some industrial and household applications, such as cleaning products and food preservatives.

The global Potassium Isooctanoate market size was estimated at USD 98.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
