Report Overview:

Potassium Niobate(KNbO_3) is an inorganic compound with the formula KNbO_3 . A colorless solid, it is classified as a perovskite ferroelectric material. It exhibits nonlinear optical properties, and is a component of some lasers.[2] Nanowires of Potassium Niobate have been used to produce tunable coherent light. Potassium niobate can be used to prepare bismuth sodium titanate(BNT)-KN ceramics (BNT–KN ceramics) by the mixed oxide method. The addition of KN to the BNT system increases the dielectric and piezoelectric properties of the BNT-KN ceramics. These properties of the ceramic system are suitable for the development of lead-free capacitors. Cu doped KNbO_3 single crystals also found application in semiconductor laser technology because Cu doping resulted in electronic states with near-infrared absorption bands.

The Global Potassium Niobate Market Size was estimated at USD 1978.11 million in 2023 and is projected to reach USD 2790.15 million by 2029, exhibiting a CAGR of 5.90% during the forecast period.
