Abstracts

Potassium phosphate for food refers to a group of inorganic salts?monopotassium phosphate (MKP), dipotassium phosphate (DKP), and tripotassium phosphate (TKP)?that are widely used as food additives to serve multiple functional purposes, including as acidity regulators, emulsifiers, stabilizers, and nutrient supplements, particularly for potassium and phosphorus fortification, in products such as processed meats, dairy alternatives, beverages, and baked goods to enhance texture, shelf life, and nutritional profile. The global market for potassium phosphate in food applications is driven by increasing demand for processed and convenience foods, growing health awareness leading to fortified products, and expanding use in plant-based and functional beverages; key regions include North America, Europe, and Asia-Pacific, with major players like Innophos Holdings, ICL Group, and Prayon S.A. dominating production and supply chains. Growth is tempered by regulatory scrutiny over phosphate intake levels and health concerns, but innovation in clean-label alternatives and rising demand in emerging economies present significant opportunities, with the market projected to expand steadily due to its indispensable role in food texture modification and nutrient enrichment.

The global Potassium Phosphate For Food market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
