Abstracts

Pouch lithium ion batteries, also known as pouch cells or LiPo (lithium polymer) batteries, are a type of rechargeable energy storage device characterized by their flexible, lightweight, and slim form factor, which is achieved by encasing the electrodes and electrolyte in a flexible, heat-sealed laminated aluminum-plastic film rather than a rigid metal or plastic casing. This design allows for greater flexibility in shape and size, making them particularly suitable for applications where space and weight constraints are critical, such as in smartphones, tablets, wearables, drones, and electric vehicles, while still offering high energy density, good discharge rates, and relatively stable performance, though they may require more careful handling to avoid physical damage such as punctures or swelling compared to their rigid counterparts.

The global Pouch Lithium Ion Batteries market size was estimated at USD 9825.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
