Report Overview

Poultry food animal eubiotics are feed additives that promote the growth and health of poultry by maintaining a balanced gut microbiota. These additives typically consist of probiotics, prebiotics, organic acids, and essential oils. By enhancing the digestive system of poultry, eubiotics improve nutrient absorption, boost immunity, and reduce the need for antibiotics in poultry farming. The global market for poultry food animal eubiotics is driven by the increasing demand for safe and healthy poultry products, growing concerns over antibiotic resistance, and stringent regulations promoting the use of natural feed additives in animal nutrition.

Market trends indicate a rising preference for eubiotics as a sustainable alternative to antibiotics in poultry production. With consumers becoming more conscious of food safety and quality, there is a growing demand for poultry products raised without antibiotics. This shift towards natural and organic poultry farming practices is fueling the adoption of eubiotics in the poultry industry. Additionally, advancements in eubiotic formulations and increased research in understanding the gut microbiota of poultry are driving market growth. At the same time, the expansion of the poultry industry in emerging economies and the rising disposable income of consumers are further propelling the demand for poultry food animal eubiotics.
