### Report Overview

Powder coating is a solid powdery synthetic resin coating composed of solid resin and pigment, filler and auxiliary. Unlike ordinary solvent-based coatings and water-based coatings, its dispersion medium is not solvent and water, but air. It has the characteristics of no solvent pollution, 100% film formation, and low energy consumption. Powder-based industrial coatings are highly efficient and are more resistant to chipping, scratching, fading and abrasion than other finishes. The VOCs released to the environment by this process are negligible and require less curing time beyond the cooling time. Low-VOC emissions from powder-based industrial coatings provide superior performance and cost-effectiveness for applications requiring maximum wear resistance and hardness.
