## Abstracts

Powder Bridge Breaker is a device used to solve the "bridge" or "arch" blockage problem formed by powder materials during storage or transportation. Powder materials (such as cement, flour, chemical powder, etc.) are prone to form a stable arch structure in the silo or hopper due to moisture, static electricity or friction between particles, resulting in the inability of the material to flow smoothly. The Powder Bridge Breaker destroys this arch structure through mechanical vibration, impact or other means to ensure the continuity of material flow.

The global Powder Bridge Breakers market size was estimated at USD 478.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
