Abstracts

Powder coating is a type of coating that is applied as a free-flowing, dry powder. The main difference between a conventional liquid paint and a powder coating is that the powder coating does not require a solvent to keep the binder and filler parts in a liquid suspension form. The coating is applied electrostatically and is then cured under heat to allow it to flow and form a "skin". The powder may be a thermoplastic or a thermoset polymer. It is usually used to create a hard finish that is tougher than conventional paint.

The global Powder Coatings market size was estimated at USD 11530.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.06% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Powder Coatings market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
