## Abstracts

Powder-spreading metal 3D printing is an important branch of metal additive manufacturing technology. This technology uses metal powder pre-placed on a powder platform as raw material, based on the three-dimensional digital model of the part, and uses high-energy beams such as lasers or electron beams to melt the powder layer by layer on a series of two-dimensional planes discrete from the three-dimensional model, and finally manufacture three-dimensional metal parts. Currently, the most widely used is powder-spreading metal 3D printing that uses laser as an energy source, also known as Selective Laser Melting (SLM).

The global Powder-spreading Metal 3D Printer market size was estimated at USD 714.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.20% during the forecast period.
