Report Overview

Powdered humic acid is a natural soil conditioner derived from organic materials such as leonardite or lignite. It is rich in humic substances, which are beneficial for improving soil structure, increasing nutrient uptake by plants, and enhancing overall soil health. Powdered humic acid is widely used in agriculture, horticulture, and gardening to promote plant growth, increase crop yields, and improve the quality of fruits and vegetables. Its ability to chelate micronutrients, retain moisture in the soil, and stimulate microbial activity makes it a valuable input for sustainable farming practices.

The market for powdered humic acid is experiencing steady growth due to the rising demand for organic and sustainable agricultural practices. As farmers and growers increasingly shift towards environmentally friendly solutions, the adoption of powdered humic acid as a soil amendment is gaining traction.
