Abstracts

A power brush for snow removal is a mechanized tool designed to efficiently clear snow from various surfaces, typically featuring a motor-driven rotating brush head that sweeps or throws snow away from pathways, driveways, decks, or other areas. These devices are commonly powered by electricity (corded or battery-operated) or gasoline, offering users an alternative to manual shoveling or larger equipment like snow blowers, particularly for lighter snowfalls or finishing touches. They are valued for their ability to clear snow without damaging underlying surfaces such as wood, pavers, or stone, and often include adjustable angles, brush materials suited for different conditions (e.g., stiff bristles for packed snow, softer for light dustings), and ergonomic designs to reduce user strain.

The global Power Brush For Snow Removal market size was estimated at USD 1650.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
