Abstracts

Power GaN (Gallium Nitride) devices are used in high-efficiency power electronics, especially where compact, high-performance systems are needed. They are increasingly popular in applications that require high power density, fast switching speeds, and high efficiency, such as in electric vehicles (EVs), data centers, consumer electronics, and renewable energy systems. The GaN Power Devices include GaN HEMT Discretes, GaN SiP, and SoC, etc. The global key manufacturers of GaN Power Devices include Infineon (GaN Systems), Navitas (GeneSiC), Innoscience, Power Integrations, Inc., Renesas Electronics (Transphorm), Efficient Power Conversion Corporation (EPC), etc. In 2024, the global top five players occupied for a share approximately 88% in terms of revenue. 2025 is shaping up as an exciting year for GaN, we are still early in the GaN revolution with huge opportunities still ahead in the short, medium, and long term. Short term, GaN has just begun to penetrate the power supply market, and adoption is accelerating across a wide range of low-power applications, including several mentioned above? metering, appliances, TVs, automotive and residential networking. In the medium term, we believe that the opportunity for GaN at high power levels is massive, nowhere more so than in AI data centers. While data center operators are eager for innovative power solutions for AI, adoption of GaN has been inhibited by the challenges of using discrete GaN in high reliability systems. Longer term, we believe GaN can achieve power levels sufficient for EV drivetrains at much lower cost than silicon carbide, the incumbent technology in many EVs.

The global Power GaN Devices market size was estimated at USD 406.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 25.60% during the forecast period.
