Abstracts

Power gear skiving machines are advanced CNC machining centers designed for the high-precision manufacturing of gears, particularly internal gears and complex gear geometries, by utilizing a skiving process—a continuous cutting method where a rotating cutter with a defined lead angle engages with a rotating workpiece to remove material in a highly efficient, single-setup operation that significantly reduces production time and improves surface finish compared to traditional gear hobbing or shaping methods. This technology is increasingly adopted in industries such as automotive, aerospace, robotics, and industrial machinery, where demand for lightweight, compact, and high-performance gear systems with tight tolerances is driving innovation and investment in advanced manufacturing equipment. Key market drivers include the shift toward electrification in automotive (e.g., electric vehicle transmissions), the need for higher productivity and flexibility in gear production, and the growing emphasis on reducing energy consumption and material waste through more efficient machining processes. Major players in this niche but growing market include global machine tool manufacturers like Gleason, Liebherr, Klingelnberg, and EMAG, with competition centered on technological advancements in tooling, software integration (such as adaptive control and digital twin simulations), and after-sales service support. Regional demand is strongest in manufacturing hubs such as Germany, Japan, China, and the United States, though supply chain considerations and high initial investment costs remain barriers to adoption for smaller manufacturers. The market is expected to see steady growth, supported by trends in automation, customization, and the ongoing transition to electric and hybrid vehicle platforms, which require specialized, high-accuracy gear components.

The global Power Gear Skiving Machine market size was estimated at USD 750.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of

6.80% during the forecast period.
