Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Power-Level Electric Motor Emulator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of power-level motor simulators will total approximately 1,000 units, with unit prices varying greatly. For high-power inverters with a power of more than 100kW, the price is usually well over \$500,000 ; while simulators for low-power applications are more popular and generally cost less than US\$10,000. A Power-Level Electric Motor Emulator is a Power Hardware-in-the-Loop (PHIL) testing and validation platform designed to replicate the electrical and mechanical behaviors of real motors in real time. By using power converters and control algorithms, it produces equivalent voltages, currents, and torque responses, enabling motor drive systems to be developed, tuned, and validated without physical motors. This approach reduces risk and cost while supporting applications in EV powertrains, aerospace electric propulsion, and industrial drives. The industry chain of power-level motor emulators consists of upstream core components, midstream system integration, and downstream applications. Upstream relies on power semiconductors (IGBT, SiC, GaN), real-time computing platforms (DSP, FPGA), and high-precision sensors as technological foundations. Midstream is dominated by global players such as dSPACE, OPAL-RT, and Typhoon HIL, along with Chinese companies like Maiwei and Beihui, with competitiveness centered on hardware-software integration and real-time simulation algorithms. Downstream focuses on EV powertrain validation, while gradually expanding into electric aviation, industrial drives, energy storage systems, and academic research. Overall, the chain is characterized by high upstream technological barriers, strong midstream integration capabilities, and broad downstream demand, with future growth driven by new energy and intelligent e-drive development.

The global Power-Level Electric Motor Emulator market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
