Report Overview:

Power magnetics consists of various components such as transformers, inductors, current sensors, chokes, reactors, and other magnetic products. These power magnetics products are widely used in the designing and manufacturing medium voltage AC drives. These drives are easy-to-use and are well-suited for variable torque applications such as simple, standalone centrifugal fans and pumps. Medium voltage AC drives are intended to optimize energy by enabling variable-speed control and soft starting in normal duty and heavy-duty applications. It is generally used in applications that require motors from 500 to 20,000 hp, where the difference in the current draw between low voltage and medium voltage becomes substantial. Motors in this range are often used to operate large compressors, pumps and fans in power stations, chemical & petrochemical plants, water & wastewater treatment facilities, cement, mining and minerals, marine, and oil and gas industries.
