## Abstracts

Power over Ethernet (PoE) is a technology that allows Ethernet cables to carry both data and electrical power to remote devices, eliminating the need for separate power supplies. This is achieved by injecting electrical power into the Ethernet cable, enabling devices such as IP cameras, VoIP phones, wireless access points, and network switches to operate with just a single connection. PoE is widely used in various industries, offering flexibility, ease of installation, and cost savings by simplifying cabling infrastructure and reducing the need for additional power outlets or adapters.

The global Power over Ethernet (PoE) Components market size was estimated at USD 1302.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.40% during the forecast period.
