Abstracts

Power plant chemicals are used in the power plants that are involved in the steam generation process with the help of the fossil fuels such as coal, oil, natural gas, and radioactive material. These power plants have a requirement of a number of chemicals so that the process of energy generation is optimized. The power plant chemicals market is mainly driven by factors such as the continuous development of the power industry, the demand for high-efficiency power generation, and environmental protection requirements. First, the continuous development of the power industry has led to a continuous increase in the demand for power plant chemicals. Power plants need a variety of chemicals to ensure their safe and efficient operation, such as water treatment chemicals, cooling tower water treatment chemicals, anti-corrosion chemicals, and fuel additives. The development of the power industry has led to an increase in the demand for these chemicals. Second, with the continuous improvement of technology, the performance requirements of power plant chemicals are also increasing. Power plant chemicals need to have high efficiency, low toxicity, low pollution, and other characteristics to meet the requirements of high-efficiency power generation and environmental protection. This requires manufacturers to continue to improve their production technology and process quality to improve product performance and reduce costs. Finally, with the continuous strengthening of environmental protection requirements, power plants need to reduce emissions and improve energy efficiency. This requires the use of high-performance power plant chemicals to ensure that the power plant meets the emission standards and operates efficiently.

The global Power Plant Chemicals market size was estimated at USD 7821.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
