Report Overview

A dust collector is a system used to enhance the quality of air released from industrial and commercial processes by collecting dust and other impurities from air or gas. Designed to handle high-volume dust loads, a dust collector system consists of a blower, dust filter, a filter-cleaning system, and a dust receptacle or dust removal system. It is distinguished from air cleaners, which use disposable filters to remove dust.

They are installed upstream power plant stack, usually between DeNOx system (a system whose purpose is to reduce NOx emissions) and flue gas desulphurisation (FGD) system (a system whose purpose is to reduce SOx emissions).
