Abstracts

Power semiconductor devices are electronic components designed to control and convert electrical power in a wide range of applications, functioning as switches, rectifiers, or amplifiers in systems handling high voltages and currents; these include discrete devices like power MOSFETs, IGBTs, and thyristors, as well as power modules and integrated circuits that manage energy flow in industrial motor drives, renewable energy systems, consumer electronics, automotive systems (especially electric vehicles), and power supplies. The market for these devices is characterized by ongoing innovation in materials?such as the transition from silicon to wide-bandgap semiconductors like silicon carbide (SiC) and gallium nitride (GaN)?which offer higher efficiency, faster switching speeds, and better thermal performance, driving adoption in energy-conscious and high-frequency applications. Key trends include rising demand from the automotive sector due to electrification, growth in renewable energy infrastructure requiring efficient power conversion, increasing need for energy-efficient industrial automation, and the expansion of consumer electronics and data centers, all of which rely on advanced power management solutions. Geographically, Asia-Pacific dominates both production and consumption, led by China, Japan, and South Korea, owing to strong manufacturing bases and high demand from electronics and automotive industries, while North America and Europe focus on innovation and high-performance applications, particularly in automotive, aerospace, and industrial sectors. The market is highly competitive, with major players like Infineon, ON Semiconductor, STMicroelectronics, Mitsubishi Electric, and Toshiba investing heavily in R&D for next-generation technologies, while price pressures, supply chain complexities, and the need for compliance with international energy efficiency standards pose ongoing challenges.

The global Power Semiconductor Devices market size was estimated at USD 57900.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of

6.20% during the forecast period.
