Abstracts

The automotive airbag fabric market encompasses the production and supply of specialized textiles engineered specifically for use in vehicle airbag systems, designed to rapidly inflate and deploy during a collision to protect occupants. These fabrics are primarily woven from high-tenacity synthetic yarns such as nylon 6.6 or polyester, treated with coatings like silicone or neoprene to ensure airtightness, controlled gas permeability, and resistance to high-temperature and high-pressure conditions during deployment. Key performance characteristics include high tensile strength, durability, flexibility for compact packaging, and compliance with stringent automotive safety standards. The market serves both original equipment manufacturers (OEMs) and aftermarket suppliers, with fabric properties tailored to various airbag types, including frontal, side-impact, curtain, and knee airbags, each requiring specific performance attributes to meet regulatory and crash-test requirements.
