Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PP Capacitor Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Capacitor film refers to a class of high-performance polymer-based dielectric materials designed specifically for film capacitors. These films are typically made from polymers such as BOPP (biaxially oriented polypropylene), PET (polyethylene terephthalate), PEN (polyethylene naphthalate), or PI (polyimide), and are made through a precision extrusion and stretching process to achieve ultra-thin, uniform thickness and excellent dielectric properties. Among various film materials, polypropylene film capacitors stand out for their excellent frequency stability, low dielectric absorption, and high withstand voltage, making them ideal for high-frequency and high-power applications. Currently, polypropylene capacitor film is the most predominant type in the capacitor film category. The global film capacitor market is showing a strong growth trend, and its development mainly benefits from the rapid expansion of the new energy vehicle industry and the continuous expansion of renewable energy power generation. In the field of new energy vehicles, China, as the world's largest new energy vehicle market, is continuously pushing up the demand for high-performance film capacitors through the accelerated layout of charging infrastructure and the technological upgrade of electric drive systems. At the same time, in the field of new energy power generation, with the in-depth promotion of China's "dual carbon" goals, the large-scale grid connection of clean energy such as solar energy and wind energy and the supporting construction of energy storage systems have significantly increased the demand for power electronic conversion equipment, thereby driving the vigorous development of the film capacitor market.

The global PP Capacitor Films market size was estimated at USD 978.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.60% during the forecast period.
