Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PP and PE Retort Pouch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of PP and PE retort pouches reached 12 billion units, with an average price of 0.06 USD per unit, a production capacity of 13.5 billion units, and a gross margin of 18%. PP and PE retort pouches are high-temperature-resistant packaging materials made primarily from polypropylene (PP) and polyethylene (PE) through multilayer lamination. They maintain excellent seal integrity and mechanical strength under high-temperature and high-pressure sterilization. These pouches are widely used in food, beverage, and pharmaceutical packaging for thermal processing and long-term preservation, featuring strong barrier performance, transparency, and recyclability. Upstream industries mainly include suppliers of polypropylene (PP), polyethylene (PE) resins, adhesives, printing inks, and aluminum foil; midstream involves film lamination, printing, and bag-making processes; downstream applications cover ready-to-eat meals, frozen foods, beverages, pet food, and pharmaceutical packaging. With the rising demand for food safety and sustainable packaging, PP and PE retort pouches are gradually replacing traditional metal can and glass bottle packaging solutions.

The global PP and PE Retort Pouch market size was estimated at USD 720.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
