## Abstracts

A PP sheet extrusion line is a specialized production system used for manufacturing polypropylene (PP) sheets. These sheets are widely used in industries like packaging, automotive, construction, and consumer goods due to their lightweight, durable, and versatile properties. A PP sheet extrusion line consists of a series of interconnected machines and components designed to transform raw polypropylene material into continuous flat sheets. The extrusion process typically involves melting the PP resin, forcing it through a flat die to form sheets, cooling the sheets, and then cutting or rolling them for further use. PP sheet extrusion lines can be highly automated and come in various sizes and configurations depending on the thickness, width, and surface finish of the sheets being produced. These lines are integral to industries where PP sheets are required for thermoforming, laminating, or fabricating end products. PP sheets continue to see growing demand due to their versatility, recyclability, and economic benefits. Key sectors such as thermoformed food packaging, stationery, medical trays, and industrial packaging are expanding rapidly, particularly in Asia-Pacific and developing regions. PP sheet production lines are becoming more automated, energy-efficient, and precise, meeting manufacturers' needs for reduced waste and higher throughput. Sustainability is a dominant trend in the plastics industry, and PP sheet production is no exception. Regulatory pressures and consumer awareness are forcing producers to invest in closed-loop systems, recyclable mono-material packaging, and recycled PP feedstock integration. Asia-Pacific, particularly China, India, and Southeast Asia, is the fastest-growing region for PP sheet production line installations. Local demand for packaged foods, growing middle-class populations, and increasing industrialization fuel the market.

The global PP Sheet Extrusion Line market size was estimated at USD 474.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10%

during the forecast period.
