Abstracts

PP Stretch Film is a kind of plastic film with stretching properties, which is made of polypropylene (PP) as the main raw material through processes such as extrusion and stretching. It has good transparency, which can clearly display the wrapped items. It also has certain flexibility and tensile strength and is not easy to break during the stretching process. Meanwhile, it has good puncture resistance and moisture resistance, which can effectively protect the items from the external environment. This stretch film is widely used in the packaging industry and is often used for winding and packaging various products, such as the single or multiple packaging of foods, daily necessities, electronic products, etc., as well as the containerized packaging of palletized goods.
