## Abstracts

PPP-RTK GNSS corrections services (sometimes also referred to as state-space representation (SSR) correction services) deliver high accuracy (close to that of RTK) and quick initialization times with the broadcast nature of PPP. Like PPP-based solutions, they rely on a model of GNSS errors with broad geographical validity and broadcast the different GNSS error components (or states) using one-way communication. The GNSS receivers then compute the GNSS corrections for their specific location. The RTK-PPP correction service market is growing in response to increasing demand for real-time, high-accuracy positioning services that do not require local base stations or dense CORS (Continuously Operating Reference Station) networks. Traditional RTK, while accurate, has been geographically limited by the range of nearby base stations (typically within 10-20 km). In contrast, PPP-RTK enables global or regional high-accuracy positioning using satellite-delivered corrections (e.g., via L-band) or IP delivery methods. This capability is vital for mobile applications and distributed fleets such as drones, autonomous vehicles, and precision agriculture equipment. Regionally, the Asia-Pacific market leads in terms of technological adoption and service deployment. Countries like Japan and China have developed proprietary regional PPP-RTK services backed by government-supported satellite infrastructure. North America is another major market, supported by a strong GNSS manufacturing base, advanced autonomous vehicle R&D, and well-established service providers. Europe is characterized by both government-backed initiatives (like the upcoming EGNOS High Accuracy Service) and strong private-sector offerings. Precision agriculture, surveying, and infrastructure monitoring are key application areas. The region's emphasis on data privacy, interoperability, and regulatory compliance also influences how services are developed and deployed. Several key trends are shaping the evolution of the RTK-PPP correction market: Cloud and API-Driven Services: Modern PPP-RTK providers offer flexible delivery via MQTT, HTTPS, or WebSockets,

making it easy to integrate into cloud platforms and IoT ecosystems. Edge Processing and Low Latency: With the adoption of 5G and MEC (Multi-Access Edge Computing), RTK-PPP corrections are being processed closer to the user for real-time performance. Miniaturization and Consumer Integration: Low-cost GNSS modules with built-in PPP-RTK capabilities are entering the consumer electronics market, enabling centimeter-level accuracy in phones, wearables, and AR/VR systems.

The global PPP-RTK GNSS Correction Service market size was estimated at USD 86.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
