## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PPR Aluminum Plastic Pipe competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PPR aluminum-plastic pipe is a multi-layer composite pipe, usually composed of two layers of polypropylene random copolymer (PP-R) inside and outside and a thin layer of aluminum alloy in the middle, which are bonded by hot melt adhesive to form an overall structure. This design combines the flexibility of plastic with the strength of aluminum, and has excellent pressure resistance, high temperature resistance, oxidation resistance and dimensional stability. The aluminum layer effectively blocks oxygen penetration and prevents system corrosion. It is suitable for hot and cold water transportation, heating systems and industrial fluid transportation. Its thermal expansion coefficient is much lower than that of ordinary PPR pipes, which can significantly reduce the deformation problem caused by thermal expansion and contraction and extend the service life of the system.

The global PPR Aluminum Plastic Pipe market size was estimated at USD 1558.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
