Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PPS Cast Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the output of PPS cast film reached 12,755 tons, with an average selling price of US\$33,489 per ton. The annual production capacity of a single-line PPS cast film is about 1,500 tons, with a gross profit margin of about 24.25%. PPS cast film refers to a film material made of polyphenylene sulfide (PPS) resin as a matrix through a casting process (usually coating, extrusion casting or stretch casting). Because PPS has excellent high temperature resistance, chemical resistance and dimensional stability, it is widely used as a film material in scenarios with high requirements for environmental stability and thermal performance. The upstream raw materials of PPS thermal conductive pipes include PPS (polyphenylene sulfide) and other basic materials such as epoxy/aromatic polymer matrices with high thermal stability, fluorinated fillers, and surface modifiers. The midstream is the PPS cast film manufacturer, and the downstream is mainly in the fields of batteries, communications, and aerospace. PPS cast film is a high-performance engineering plastic film with excellent properties such as high-temperature resistance, corrosion resistance, and flame retardancy. It is widely used in electronics, new energy, aerospace, and other fields. China has become the world's largest producer of PPS resin. Some companies, such as Chengdu Benzene Ring New Materials Technology Co., Ltd., have achieved large-scale mass production of PPS film, with a daily capacity of 300,000 square meters, filling a domestic gap. Domestic production capacity is primarily concentrated in leading companies such as Xinhecheng and Hesheng Industrial, and their actual output ranks among the highest in the world, but high-end products still rely on imports. Domestic PPS film has reached internationally advanced levels in heat resistance and flame retardancy, and some

products can replace imports. Compared with international giants (such as Japan's Toray and South Korea's SKC), domestic companies still lag behind in core technologies such as molecular weight control and impurity removal, and high-end application areas (such as semiconductors and aerospace) rely on imports.

The global PPS Cast Film market size was estimated at USD 427.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
