Abstracts

Pre-applied threadlockers are specialized anaerobic adhesives applied to threaded fasteners during manufacturing, designed to prevent loosening caused by vibration, thermal cycling, or dynamic loads by curing in the absence of air and between metal surfaces. These products are engineered to offer controlled strength—typically in low, medium, or high grades—to allow for disassembly when required, while ensuring reliable locking performance across industries such as automotive, aerospace, electronics, industrial machinery, and consumer goods. Their application method involves precise dosing onto fastener threads prior to assembly, offering manufacturers efficiency gains, reduced on-site error, and improved consistency compared to manual post-assembly application of liquid threadlockers.

The global Pre Applied Threadlockers market size was estimated at USD 580.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
