Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pre-drilled Ground Anchor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global pre-drilled Ground Anchor production reached approximately 600 Km, with an average global market price of around US\$ 400 per m. A Pre-drilled Ground Anchor is a ground reinforcement element formed by pre-drilling a hole, inserting an anchor rod, and grouting or filling with mortar to create a solid anchorage. It is commonly used for slope stabilization, foundation pit support, and geotechnical structure reinforcement. The pre-drilling process allows precise control over hole position and depth, ensuring high-quality anchorage and adaptability to complex geological conditions. Self-Drilling Micropiles represent a vital evolution in micropile technology, offering simultaneous drilling, grouting, and reinforcement in a single operation. Unlike conventional micropiles, they eliminate the need for casing or pre-boring, reducing risks of borehole collapse and significantly improving efficiency in loose soils, gravel layers, and fractured rock conditions. The market is currently dominated by R-Thread and T-Thread hollow bar systems. R-Thread products are cost-effective and suitable for general reinforcement applications, while T-Thread systems, with deeper thread geometry and higher mechanical performance, are increasingly favored in demanding projects involving heavy loads and difficult geology. In terms of regional adoption, Asia-Pacific (especially China and Southeast Asia) drives demand through large-scale infrastructure and slope stabilization projects. Europe emphasizes high-standard tunneling applications, heritage building reinforcement, and eco-friendly construction methods. Meanwhile, in the Americas, self-drilling micropiles are widely adopted for bridge underpinning, geotechnical reinforcement, and landslide mitigation. Looking forward, four trends are shaping the sector: (1) enhanced materials with high-strength steel and

advanced corrosion protection for extended service life; (2) integration of smart technologies such as pressure and flow monitoring for controlled grouting and quality assurance; (3) modular and customizable product ranges to suit varied diameters and ground conditions; and (4) strong growth in applications tied to renewable energy infrastructure, underground urban development, and high-slope engineering. Together, these trends ensure that self-drilling micropiles will play an increasingly strategic role in global geotechnical construction.

The global Pre-drilled Ground Anchor market size was estimated at USD 240.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.
