Report Overview

Pre-engineered building (PEB) is a building enclosure system, which consists of a particular building structure along with roof and wall cladding. The PEB structural systems consist of rigid frames that are fabricated from plate steel. These rigid frames contain roof beams and columns that are field bolted together, thus they can span large distances without intermediate supporting columns. Various advantages offered by pre-engineered building include reduced construction time, lower cost, flexibility of expansion, large clear spans, quality control, low maintenance, energy-efficient roofing & wall systems, architectural versatility, and single source responsibility.
