## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pre-Lithiated SiOx Anode Material competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Pre-lithiated SiOx anode material refers to silicon oxide (SiOx)-based anode material that has undergone pre-lithiation treatment before or during cell assembly to improve its initial coulombic efficiency (ICE) and mitigate the first-cycle irreversible capacity loss. This treatment is crucial for maintaining high energy density and extending battery life. Pre-lithiation enables SiOx to be more commercially viable in next-generation lithium-ion batteries, especially for high-energy electric vehicles and aerospace applications.

The global Pre-Lithiated SiOx Anode Material market size was estimated at USD 224.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.30% during the forecast period.
