Report Overview

Pre-paint steel is a bare metal substrate or corrosion resistant substrate that has had paint applied to both sides through a continuous coil coating process, which produces a uniform paint finish. The metal is unwound, cleaned and chemically treated during the process. Depending on product specifications, one or both sides may then be primed and coated, oven cured and rewound. Pre-painted steel coils are used in roofing and wall paneling application of metal and post-frame buildings. The use of metal building systems is prevalent in construction projects, especially in warehouses, distribution centers, and industrial facilities.
