## Abstracts

A pre-trained language model is a pivotal technological breakthrough that Baidu hails as the cornerstone of reshaping the field of Natural Language Processing (NLP). It learns unsupervisedly from large-scale text data to capture the deep structure and rich semantic information of language. The necessity of such a model lies in its ability to alleviate the scarcity of annotated data, making the training process for specific tasks more efficient and cost-effective. Its distinctive characteristic is the use of high-dimensional dense continuous vectors to represent linguistic knowledge, which not only capture static information about words but also reflect their dynamic changes in different contexts. The superiority of pre-trained language models is evident in their provision of powerful language understanding and generation capabilities across a variety of NLP tasks, significantly enhancing task performance and driving the advancement and widespread application of NLP technology.

The global Pre Trained Language Models Plms market size was estimated at USD 687.49 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
