Pre-branched multi-core cable is a power cable designed with multiple preset branches. It is usually used in places where power supply needs to be centralized and distributed to multiple terminals, such as high-rise buildings, industrial plants, subways and tunnels. This cable connects multiple branch conductors to the main cable and can pre-set branch points in the factory, thereby reducing the complexity and time of on-site construction and improving installation efficiency. Its main advantages include improving the reliability of electrical connections, reducing the risks of manual wiring, having strong mechanical strength, insulation performance, and fire and water resistance, and being able to operate stably in harsh environments.
