## Abstracts

A prebuilt gaming PC is a personal computer that is assembled and configured by a manufacturer or retailer specifically for the purpose of gaming. These systems come ready to use right out of the box, eliminating the need for the end user to source and install individual components themselves. Prebuilt gaming PCs typically feature a combination of high-performance components carefully selected to deliver a smooth gaming experience. This includes powerful processors, such as Intel Core i or AMD Ryzen series chips, which can handle complex in-game tasks and multitasking. High-end graphics cards, often from NVIDIA's GeForce RTX or AMD's Radeon RX families, are included to render detailed and visually stunning game worlds. They also usually have a substantial amount of random access memory (RAM), often 16GB or more, to ensure quick data access and smooth gameplay. Storage options commonly include solid-state drives (SSDs) for fast game loading times and sometimes traditional hard disk drives (HDDs) for additional storage capacity. Prebuilt gaming PCs may also come with custom-designed cases that offer good airflow for cooling, and some may include features like RGB lighting for aesthetic appeal. They are available at various price points, catering to different levels of gamers, from casual players to hardcore enthusiasts, and often come with a warranty and technical support for added peace of mind.

The global Prebuilt Gaming PC market size was estimated at USD 1359.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
